DATE MAILED: 06/02/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

09/779,357

Applicant(s)

BANERJEE ET AL.

Examiner

Quoc A. Tran

Art Unit

2176

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 23 February 2005.  
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.  
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-39 is/are pending in the application.  
4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.  
6) ☒ Claim(s) 1-39 is/are rejected.  
7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.  
8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.  
10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All b) ☐ Some \* c) ☐ None of:  
1. ☐ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  
\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)  
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)  
3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.  
4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.  
5) ☐ Notice of Informal Patent Application (PTO-152)  
6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

1. This action is responsive to Amendment A, filed 02/23/2005.
2. Claims 1-39 are currently pending in this application. Claims 1, 14, and 27 are independent claims.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1-2, 6-15, 19-28, and 32-39**, are rejected under 35 U.S.C. 103(a) as being unpatentable over Schuetze et al. US 20030074368A1- filed 10/19/1999 (hereinafter Schuetze), in view of Chaudhry US006567103B1 - filed 08/02/2000 (hereinafter Chaudhry).

**In regard to independent claim 14**, “*determining a weight for each of said plurality of embedded hyperlinks, prioritizing said plurality of embedded hyperlinks based upon said weights*”, as described in Schuetze at page 1, paragraph [0013] (i.e. Goggle’s metric of importance is based upon two primary factors: the number of pages (elsewhere on the Web) that link to a page (i.e., “inlinks,” defining the retrieved page as an “authority”), and the number of pages that the retrieved page links to (i.e., “outlinks,” defining the retrieved page as a “hub”). A page’s inlinks and outlinks are weighted, based on the Google-determined importance of the linked pages,

resulting in an importance score for each retrieved page. The search results are presented in order of decreasing score, with the most important pages presented first. It should be noted that Google's page importance metric is based on the pattern of links on the Web as a whole, and is not limited (and at this time cannot be limited) to the preferences of a single user or group of users),

*"whereby said user may select said hyperlinks based upon said prioritizing"*, as taught by Schuetze at page 3, paragraph [0026] (i.e user selects the image most similar to what they are looking for. In some systems, the user can directly specify image features such as color distribution and can also specify weights on different features, such as color histograms, texture, and shape. In web pages, the current image retrieval technology also allows the use of URL, alt tags, and hyperlink text to index images on the web),

Schuetze does not explicitly teach, *"visually distinguishing said plurality of embedded hyperlinks from each other based upon said prioritizing"*, as taught by Chaudhry at col. 3, lines 20-40 (i.e. The predetermined variable time interval to display each frame is based on the relevance or score of the hyperlink (search result) to which the frame refers), also as taught by Chaudhry at col. 5, lines 30-35 (i.e. as illustrated in FIG. 6 a method 110 for determining the display time for a search result in accordance with the invention, the SCORE value may be based on the relevance of the document that a search engine assigns to the document as a weight wherein 1.00 is the highest score and 0.01 is the lowest score ).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have modified Chaudhry into Schuetze to provide a way, wherein visually distinguishing said plurality of embedded hyperlinks from each other based upon said

prioritizing. One of ordinary skill in the art would have been motivated to modify this combination to provide the user with textual and graphical search result information about each search result, so that a user may more easily review and analyze the search results, as taught by Chaudhry at col. 1, lines 40-55 (i.e. a user may more easily review and analyze the search results).

**In regard to dependent claim 15**, “ *selectively highlighting a set of said plurality of embedded hyperlinks* ”, as taught by Schuetze at page 3, paragraph [0026] (i.e... user selects the image most similar to what they are looking for... In some systems, the user can directly specify image features such as color distribution and can also specify weights on different features, such as color histograms, texture, and shape. In web pages... Current image retrieval technology also allows the use of URL, alt tags, and hyperlink text to index images on the web. One approach also attempts to determine for each word surrounding an image caption whether it is likely to be a caption word and then matches caption words to "visual foci" or regions of images (such as the foreground). The Webseek image search engine and MARS-2 allow for relevance feedback on images by marking them as positive or negative exemplars...).

**In regard to dependent claims 20** incorporates substantially similar subject matter as cited in claim 14, and therefore is similarly rejected along the same rationale.

**In regard to dependent claims 21**, “ *the frequency with which the linked hypertext document is universally accessed from the Web* ”, as taught by Schuetze at page 3, paragraph [124] (i.e... among users in a user population,... page usage has been found to be indicative of users' information-seeking preferences. For the page usage modality, page accesses are first identified (step 810). The token frequency weight (step 812) and inverse context frequency

weight (step 814) are again preferably used, the context being each user and a token being a user's page accesses...).

**In regard to dependent claims 22,** “*the notoriety of the linked hypertext document*”, as taught by Schuetze at page 3, paragraph [124] (i.e.... among users in a user population, page usage has been found to be indicative of users' information-seeking preferences. For the page usage modality, page accesses are first identified (step 810). The token frequency weight (step 812) and inverse context frequency weight (step 814) are again preferably used, the context being each user and a token being a user's page accesses...).

**In regard to dependent claims 23, and 24** are directed to a web browser for performing the method of claim 14, and are similarly rejected under the same rationale.

**In regard to dependent claim 25** directed to a web browser for performing the method of claim 15, and is similarly rejected under the same rationale.

**In regard to dependent claims 26,** “*prefetching from the Web hypertext documents respectively linked to said set of embedded hyperlinks prior to a user selection of any of said set of hyperlinks*”, as described in Schuetze at page 1, paragraph [0013] (i.e.... Google's metric of importance is based upon two primary factors: the number of pages (elsewhere on the Web) that link to a page (i.e., "inlinks," defining the retrieved page as an "authority"), and the number of pages that the retrieved page links to (i.e., "outlinks," defining the retrieved page as a "hub"). A page's inlinks and outlinks are weighted, based on the Google-determined importance of the linked pages, resulting in an importance score for each retrieved page. The search results are presented in order of decreasing score, with the most important pages presented first. It should be noted that Google's page importance metric is based on the pattern of links on the Web as a

whole, and is not limited (and at this time cannot be limited) to the preferences of a single user or group of users...).

**In regard to independent claim 19,** “ *wherein said step of selectively highlighting said set of hyperlinks includes only activating said set of hyperlinks* ”, as taught by Schuetze at page 3, paragraph [124] (i.e.... among users in a user population, page usage has been found to be indicative of users' information-seeking preferences. For the page usage modality, page accesses are first identified (step 810). The token frequency weight (step 812) and inverse context frequency weight (step 814) are again preferably used, the context being each user and a token being a user's page accesses...).

**In regard to independent claims 1, and 27** are directed to a web communication network system and a computer readable medium for performing the method of claim 14, and are similarly rejected under the same rationale.

**In regard to dependent claims 2, and 28** are directed to a web communication network system and a computer readable medium for performing the method of claim 15, and are similarly rejected under the same rationale.

**In regard to dependent claims 6, and 32** are directed to a web communication network system and a computer readable medium for performing the method of claim 19, and are similarly rejected under the same rationale.

**In regard to dependent claims 7, and 33** are directed to a web communication network system and a computer readable medium for performing the method of claim 20, and are similarly rejected under the same rationale.

**In regard to dependent claims 8, and 34** are directed to a web communication network system and a computer readable medium for performing the method of claim 21, and are similarly rejected under the same rationale.

**In regard to dependent claims 9, and 35** are directed to a web communication network system and a computer readable medium for performing the method of claim 22, and are similarly rejected under the same rationale.

**In regard to dependent claims 10, and 36** are directed to a web communication network system with a web search engine and a computer program including a web search program for performing the method of claim 23, and are similarly rejected under the same rationale.

**In regard to dependent claims 11, and 37** are directed to a web communication network system and a computer program with a web browser program for performing the method of claim 24, and are similarly rejected under the same rationale.

**In regard to dependent claims 12, and 38** are directed to a web communication network system and a computer program with a web browser program for performing the method of claim 25, and are similarly rejected under the same rationale.

**In regard to dependent claims 13, and 39** are directed to a web communication network system and a computer program with a web browser program for performing the method of claim 26, and are similarly rejected under the same rationale.

5. **Claims 3-5, 16-18, and 29-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schuetze et al. US 20030074368A1- filed 10/19/1999 (hereinafter Schuetze), in view of Chaudhry US006567103B1 - filed 08/02/2000 (hereinafter Chaudhry), in further view of Wattenberg US 20040205575A1, provisional No. 60/283,790 - filed 08//2001 (hereinafter '770).**

**In regard to dependent claims 16-18, Schuetze and Chaudhry do not explicitly teach, *varying the brightness of said set of hyperlinks, varying the color of said set of hyperlinks, blinking said set of hyperlinks*, however as taught by '962 at page 5, paragraph [0061] (i.e... The term "hyperlink" is used herein in its conventional sense, preferably referring to a predefined linkage between one object and another. A hyperlink can be displayed on the page as either text or an icon (symbol) or underlining or shading... by blinking or underlining or color....).**

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have modified '962 into Schuetze and Chaudhry to provide a way, wherein varying the brightness of said set of hyperlinks, varying the color of said set of hyperlinks, blinking said set of hyperlinks. One of ordinary skill in the art would have been motivated to modify this combination to provide the user with textual and graphical search result information about each search result, so that a user may more easily review and analyze the search results, as taught by Chaudhry at col. 1, lines 40-55 (i.e.... a user may more easily review and analyze the search results...).

**In regard to dependent claims 3-5, and 29-31** are directed to a web communication network system and a computer readable medium for performing the method of claims 16-18, and are similarly rejected under the same rationale.

### ***Response to Argument***

6. Applicant's Amendment and arguments filed 02/23/2005 have been fully considered but they are not persuasive. The reason for rejection is set forth in the rejection state above.

#### **Reponses to argument claims 1-2, 6-15, 19-28 and 32-39 Remarks pages 2-5:**

Applicant argues that, the cited prior art were not **visually distinguishing said plurality of embedded hyperlinks from each other based upon said prioritizing**. The Office respectfully disagrees; the reason is set forth in the previous rejection states above and further view of the following:

As taught by Schuetze at pages 3-4, paragraphs [0031], [0033], [0035], [0037]-[0038] and [0043], the object of the invention is provide a technique, whereby the search result presented to users in a large set of data where each object has several disparate types of information associated with it, which are called modalities. Examples of such data sets include the pages of a World Wide Web site (modalities here could be text, inlinks, outlinks, image characteristics; text genre, etc.); various modalities were utilized for browsing and retrieving the result information, such as visually representing graphically and textually. Multi-modal features may take on many forms, such as text Vector text, Subject text, URLs, text Inlinks, hyperlink Outlinks hyperlink, Genre and Color Histogram image etc. In another disclosure set forth

improved methods of visually representing clusters of documents. While documents are frequently stored hierarchically, enabling a hierarchical visual representation, whereby allowed for a view of user data by way of a hierarchical view of the documents and can be visualized similarly, and also visualized similarity textually by the means of 'salient dimensions'. The above approach is used here in the broadest reasonable interpretation of the claimed invention, such as means for determining means for visually distinguishing said plurality of embedded hyperlinks from each other based upon said prioritizing. Therefor the rejection is proper.

### ***Conclusion***

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quoc A. Tran whose telephone number is (571) 272- 4103. The examiner can normally be reached on Monday through Friday from 8:30AM to 5:00PM.

Art Unit: 2176

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph H. Feild can be reached on (571) 272-4090. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
